**The new bathroom architecture says it all:
Less is more**

The concept behind floor-level bathroom architecture is based on creating a generous sense of space by sticking to just a few materials, and leaving out all optical and real barriers. The concept mirrors classic oriental bath culture as well as modern luxury spas.

ACO ShowerDrain is designed to give you plenty of freedom for floor-level bathroom architecture and still maintain the very clear boundary between the wet and dry zones within your bathroom.

Clear line

The straight ACO ShowerDrain sets a graphic accent wherever required: along a wall, parallel to the shower wall or within the room. The standard lengths of 600, 700, 800, 900, 1000 and 1200 mm, as well as customised lengths, give you the freedom to plan without having to make any compromises.

Eight stainless steel designer models are available for the gratings. Unrestricted interior design is possible with tiles or glass materials.

mineral beige, mineral grey, mineral black

Extravagant curves

Create an outstanding shower experience:
We worked together with Glamü – an acclaimed manufacturer of high quality shower enclosures – to develop the curved ACO ShowerDrain.

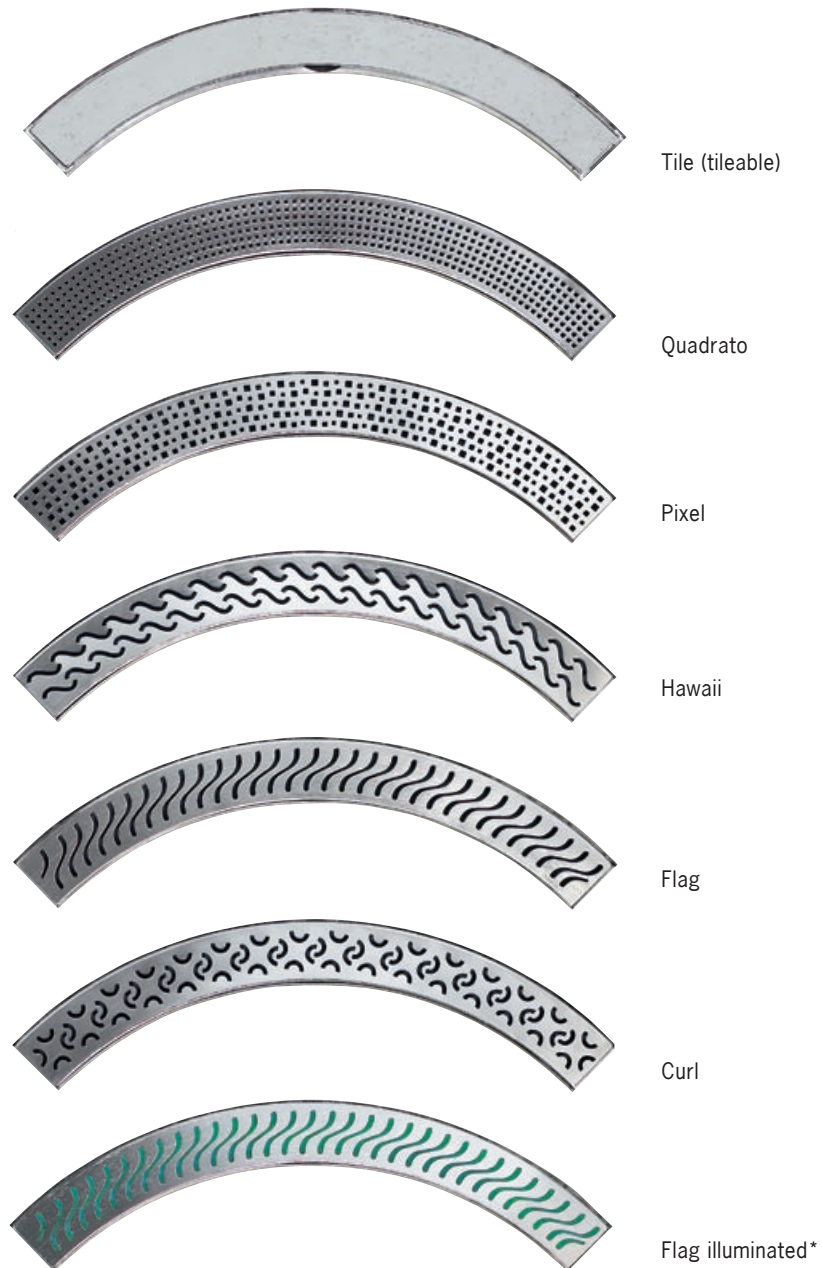

The shower drain with an external radius of 550 millimetres and straight shoulders already incorporates the fastening for the free-standing shower enclosure made of laminated safety glass – available in a range of models. The combination of the ACO ShowerDrain and the free-standing shower enclosure creates a visually exclusive and structurally elegant complete solution for your new bathroom.

red dot design award
winner 2009

The curved model of the unilluminated ACO ShowerDrain won the iF product design award 2009 and the red dot design award 2009

Designer gratings for the curved ACO ShowerDrain

*Designer gratings for the curved models can be illuminated in blue, red, green and rainbow colours

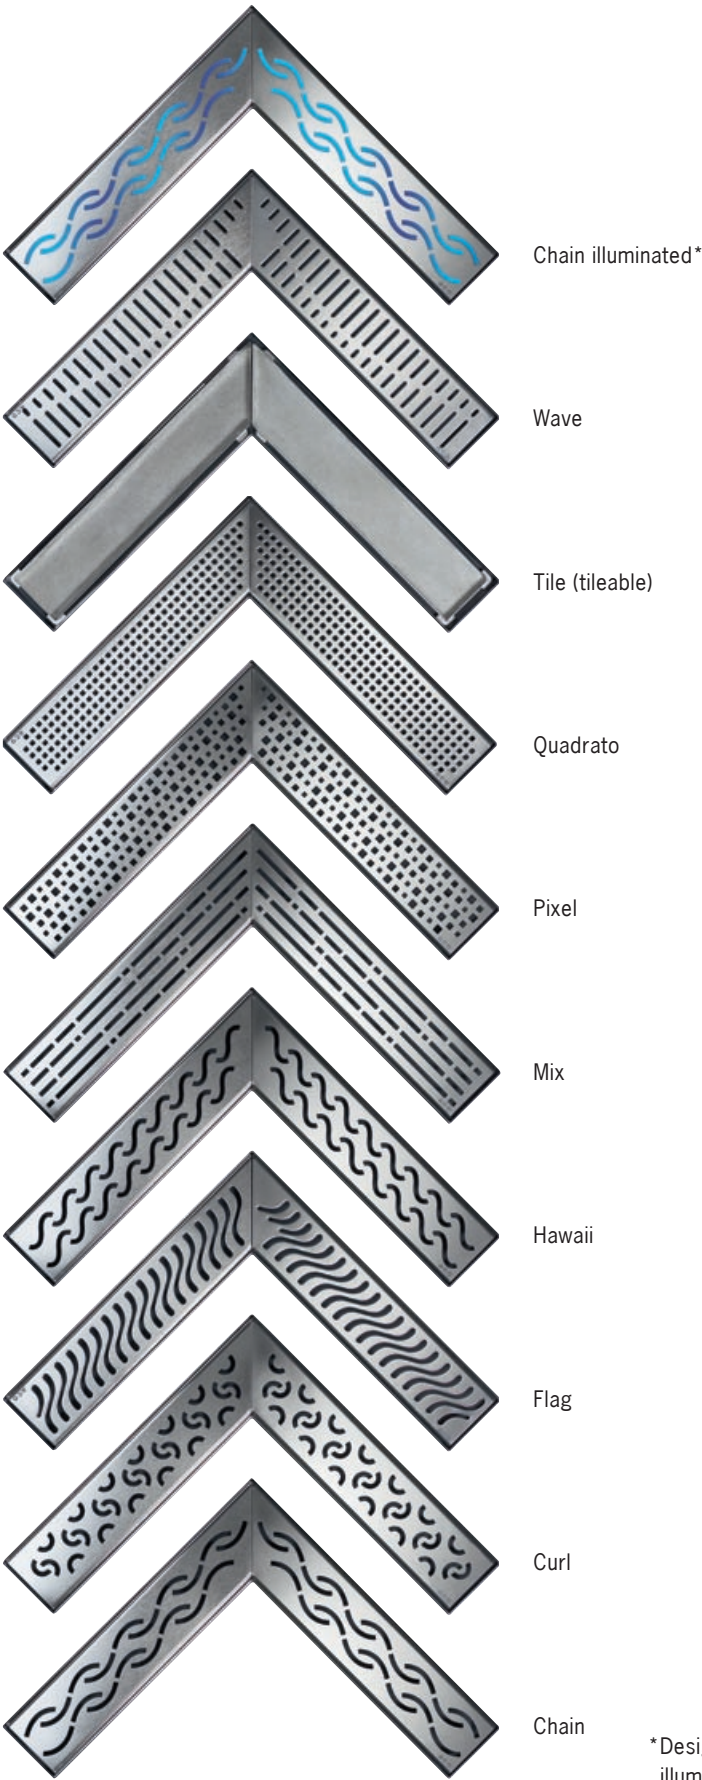

Discreet corner solution

The corner solution of the ACO ShowerDrain provides you with an optically very discreet channel solution. The electropolished stainless steel gratings come in eight different designs, as well as a tile grating for customised design with tiles.

Designer gratings for the corner ACO ShowerDrain

*Designer gratings for the corner models can be illuminated in blue, red, green and rainbow colours

Exclusive entry

With the Walk-in solution, you set a high quality and unusual accent with top drainage functionality. The luxurious grate made of water-resistant oiled hardwood covers and electropolished stainless steel tray – with or without a drain – which collects the water droplets or splashes from the shower. Available in five standard sizes.

An eye-catching design element: The ACO ShowerDrain Walk-in made of water-resistant oiled hardwood – one hundred per cent floor-level solution

Light shows

Create magical lighting effects in your bathroom! With the world's first illuminated shower drainage channel, ACO Shower-Drain Lightline turns your bathroom into a light show every time you shower. An energy-saving LED module with rechargeable batteries can be quickly installed – also suitable for retrofitting. They light up automatically when enough water flows into the channel and turn off automatically again after a short delay when water stops flowing.

The illumination kits are available for the straight, curved and corner ACO ShowerDrains.

The LED modules are available in blue, red, green and rainbow colours.

Eye-catching point

Stick to your demand for sophisticated solutions – even with minimalist designs. Floor drains with circular or square designer gratings are the technical and aesthetic alternatives to channels. Special designer models are available for the square and the round tainless steel gratings. This allows channels and point drains to be harmoniously combined in large bathrooms or facilities.
