

**ACO. creating
the future of drainage**

ACO DRAINAGE SYSTEMS PRODUCT OVERVIEW

Material performance that meet global standards

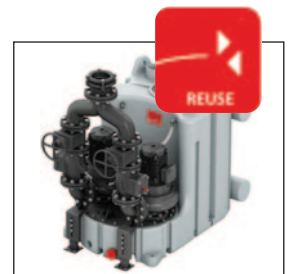

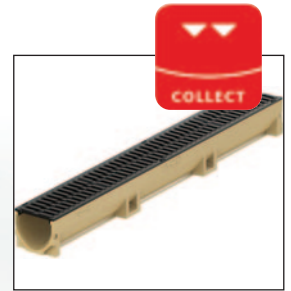

ACO. creating the future of drainage

ACO SYSTEM CHAIN

integrated solutions for tomorrow's environmental conditions

ACO has thus created it's unique Surface Water Management Cycle: "Collect – Clean – Hold – Reuse" – the four core processes now required for the complete and sustainable management of surface water drainage.

ACO Systems SA and Sub-Saharan Africa

2 Established in 2012, ACO Systems SA provides the highest levels of support and service to over 20 countries, including all SADC countries, within the African continent.

The ACO Group opened regional offices in **Kenya** in 2019, to service East African countries, and in **Nigeria** in 2020, servicing West African countries.

8 applications for abattoirs

Office building

Processing area

Cooling room

Wash area

Offals area

Loading bay

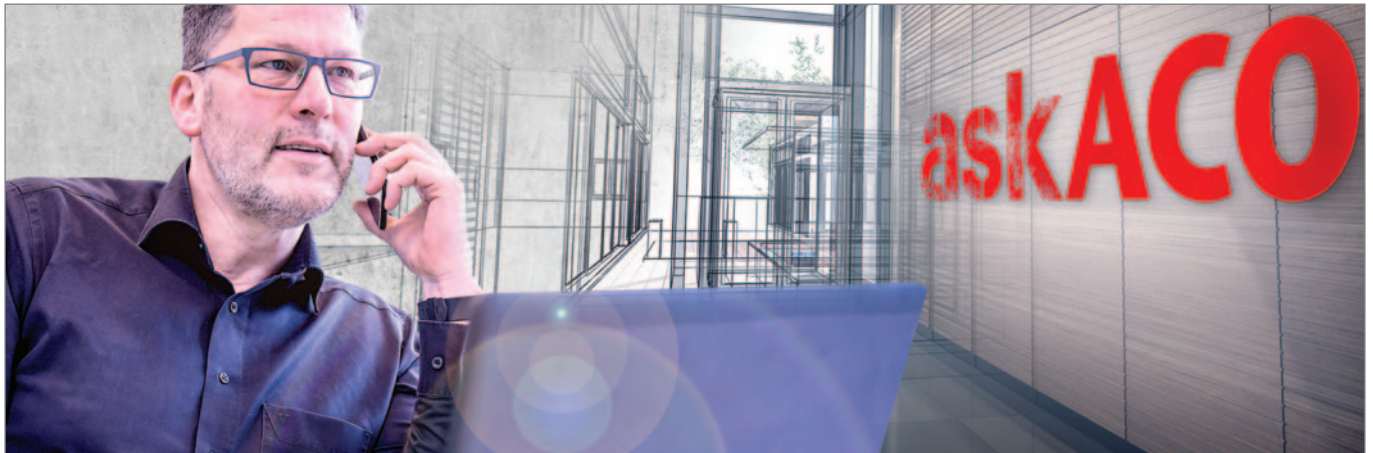

Waste water

Refuse area and courtyard

Working together to tackle each project successfully

DSA is an independent consultative activity. Our service team is capable to assess the food production environment with focus on drainage system, floors, walls, general cleanliness and facility (technology) layout.

The ACO Drainage System Assessment (ACO DSA) comprises a complex evaluation of the existing drainage system and surrounding environment including production and service technologies and its impact on potential risks within food processing plants. This evaluation also covers risks arising from drainage integration, and floor and wall quality.

The DSA identifies drainage issues found and describes their impact on production from the point of view of:

- Hygiene
- Safety (employee health and safety, and product safety risks)
- Operations (production continuity risks)
